About me

Full Stack Developer with 3+ years building web and mobile products with **JavaScript/TypeScript, ReactJS, Next.js, Vue.js** and **Flutter**, backed by **Node.js, Java** and **PHP**. Experienced in coordinating a development team, defining reference architectures and implementing **CI/CD** pipelines. Strong focus on **SSR** performance, e-commerce API integrations and infrastructure cost reduction.

Skills

Languages: JavaScript (ES6), TypeScript, Java, Python, PHP, Dart, SQL

Frontend: ReactJS, Next.js, Vue.js, Nuxt 3, React Native, Flutter, Tailwind, Sass, UI/UX

Backend & APIs: Node.js, Java, Laravel, WordPress, Directus, REST, GraphQL

Databases: MySQL, SQLite

Cloud & DevOps: AWS, Google Cloud, Cloudflare, Docker, NGINX, Linux, Git, GitHub, CI/CD

E-commerce: VTEX, Shopify, Hotmart, Eduzz

Testing & Automation: Cypress, Jest, n8n (basic knowledge)

Practices: Scrum, Kanban, Clean Code, SOLID, Code Review, Technical Support

Spoken Languages: Portuguese (native), English (intermediate)

Experience

Software Developer

SC, Brazil

PrologApp

Jun 2025 – Present

Full stack developer on a fleet management product used by more than 1,000 logistics companies, building it across three stacks: **ReactJS** on the web, **Flutter** on mobile, and **Java** on the backend.

Key Results:

- Rebuilt a heavy data table with list **virtualization** in **ReactJS**, removing the browser freezes that had made the screen unusable for a large client and retaining an account that was already heading toward a refund request.
- Shipped real-time license plate recognition with **OCR** in the **Flutter** mobile app, removing manual plate entry from the daily routine of fleet managers and drivers in the field.
- Build the same fleet management product across three stacks, **ReactJS** on the web, **Flutter** on mobile, and **Java** on the backend, delivering one consistent experience on every platform.
- Work on the **Java** backend that serves the fleet management platform, implementing the server-side features the web and mobile clients consume.

Software Developer

SC, Brazil

Kebook

Nov 2022 – Jun 2025

Coordinated a 4-developer team while working full-cycle on the product, from responsive **SSR** front ends to the e-commerce integrations and the hosting infrastructure behind them.

Key Results:

- Coordinated a 4-developer team, defining reference architectures, enforcing coding standards through code reviews, and implementing **CI/CD** pipelines.
- Built responsive interfaces with **React** and **Vue.js** using **SSR** (**Next.js/Nuxt.js**) to optimize SEO and load time, reaching under 1s in **Lighthouse** on two large **SPA** projects of more than 1,000 pages each.

- Designed and rolled out a new hosting infrastructure for the project, cutting annual hosting cost from R\$45,000 to R\$15,000, a reduction of two thirds.
- Implemented **webhooks** that kept transactions, inventory and sales metrics in sync in real time, handling over 3,000 dispatches per day across every state of a sale (initiated, completed, cancelled and refunded), with load and stress testing validating headroom for 10,000 per day.
- Automated publishing flows to infoproduct marketplaces (**Hotmart**, **Eduzz**) through their **RESTful** APIs with scripts in **Python** and **Node.js**.
- Integrated **REST** and **GraphQL** APIs to make content dynamic, and instrumented analytics tracking with **Google Analytics** and **Meta Pixel**.
- Mentored the team on software engineering best practices (**SOLID**, **Clean Code**) and drove the adoption of agile methodologies (**Scrum/Kanban**).
